## When the Phone is More Dangerous than Malware

SESSION ID: HUM-R02

**Christopher Hadnagy**

Chief Human Hacker  
Social-Engineer, Inc.  
@humanhacker

**Michele Fincher**

Chief Influencing Agent  
Social-Engineer, Inc.  
@SocEngineerInc

# What is Social Engineering?

“....any act that influences a person to take an action that may or may not be in their best interests...”

# What is a Social Engineering Attack?

- ◆ There are three main methods used in social engineering:
  - ◆ Phishing
  - ◆ Phone elicitation
  - ◆ Onsite impersonation

# Scary Statistics & Quotes

Source: <http://hackmageddon.com>

# Scary Statistics & Quotes

“Human errors and systems glitches caused nearly two-thirds of data breaches globally in 2012, while malicious or criminal attacks are the most costly everywhere at an average of \$157 per compromised record.” - *2013 Cost of a Data Breach: Global Analysis*, Ponemon Institute and Symantec, June 2013

# Scary Statistics & Quotes

“Through 2016, the financial impact of cybercrime will grow 10 percent per year due to the continuing discovery of new vulnerabilities.” - *Gartner Top Predictions for 2012: Control Slips Away*, Gartner, December 2011

# What Can You Do?

- ◆ Three-step process for successfully combatting social engineering
  - ◆ Be educated
  - ◆ Get regular check ups
  - ◆ Create critical thinking infrastructure

# Step 1: Be Educated

- ◆ Learn to identify current SE Attacks
- ◆ Learn:
  - ◆ what to do IF an attack occurs
  - ◆ what to do WHEN they click/answer/let someone in
  - ◆ WHY malicious people use these types of attacks
- ◆ Learn how to effectively communicate risk to your staff
- ◆ Remember that technology cannot fix this problem

## Step 2: Get Regular Check Ups

- ◆ A company can't fix problems they don't know exist
- ◆ Don't go with the "free clinic", but a specialist
- ◆ Identify the risk, test the vulnerabilities and work on patching
- ◆ Educate without fear
- ◆ Re-test

Story Time

# Step 2:

# Story Time

## Step 2: Story Time

They wanted to test their company against an all-out social engineering attack that would utilize:

- ◆ Phishing – 2 campaigns at varying levels
- ◆ Spear phishing of every executive
- ◆ Phone elicitation against a section of each department
- ◆ Physical entry access to 4 of their main buildings

# SE Pentest Stage One: Info Gathering

- Corporate website
- Google dorks
- Company browser websites
- Vendors
- Review sites

And of course...

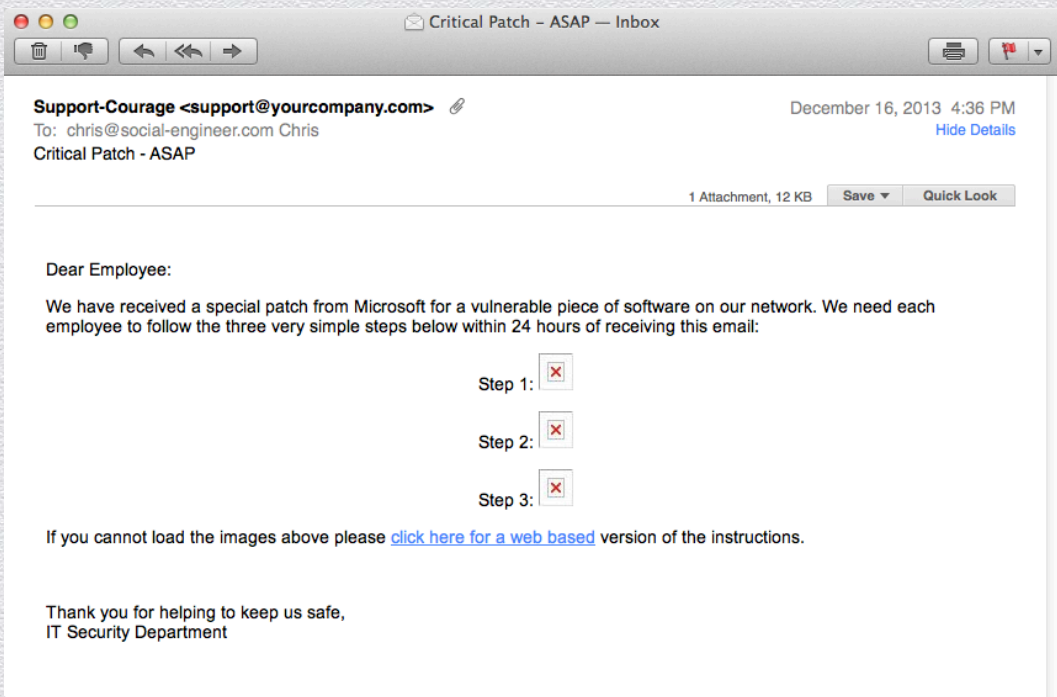

- Social media

# SE Pentest Stage Two: Profiling

Goal in this stage:

- ◆ Determine culture
- ◆ Specific vulnerabilities
- ◆ Hobbies / likes / dislikes
- ◆ Email methodology
- ◆ Policies for information release

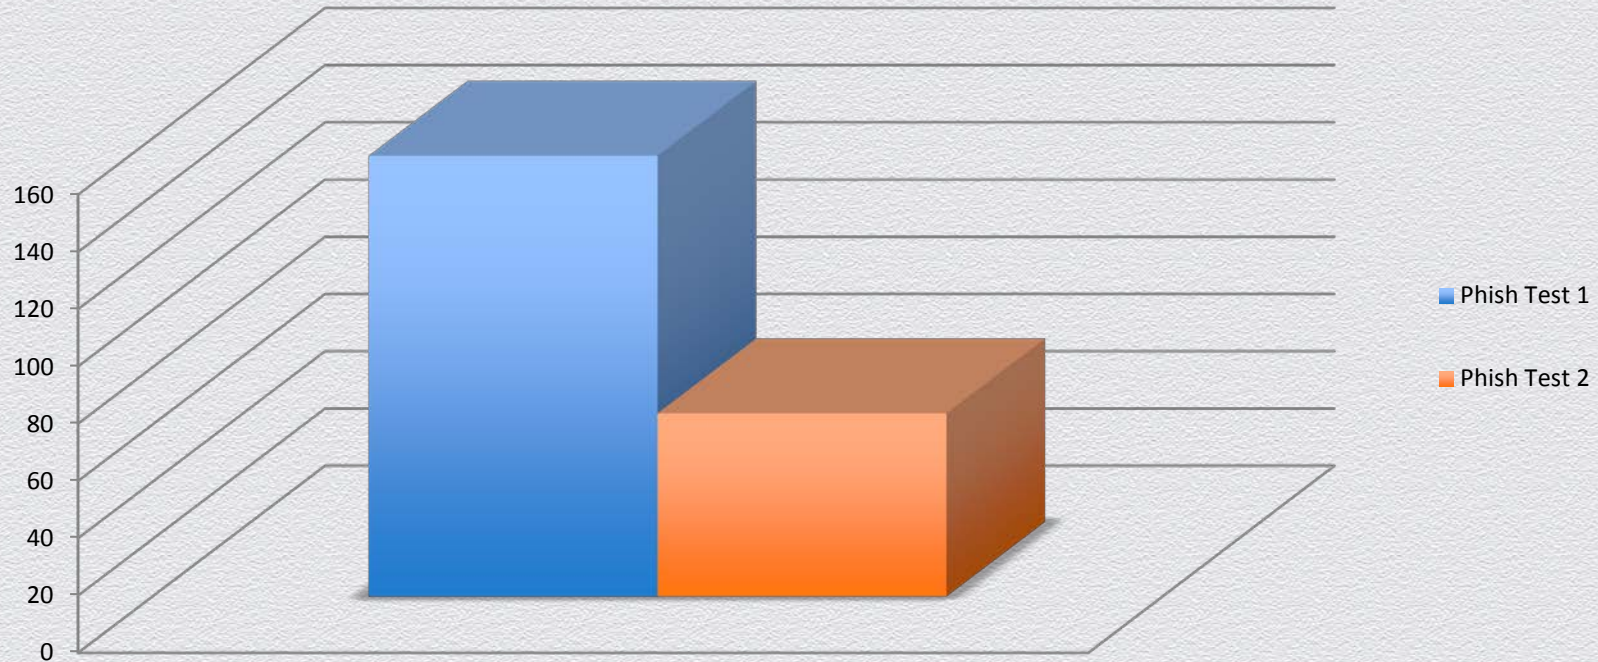

# SE Pentest Stage Three: Phishing / Spear Phishing

## Goal in this stage:

- ◆ Demonstrate a realistic phish
- ◆ Educate – tracking
- ◆ Employees told at point of click

# Phishing Results Series 1 vs Series 2

# SE Pentest Stage Four: Vishing

Goal in this stage:

- ◆ Call as internal employees
- ◆ Educate – test protocols of giving out sensitive info
- ◆ Lisa from HR or Paul from IT

<b>Name Confirm:</b>	<b>80%</b>
<b>Dept Confirm</b>	<b>67%</b>
<b>Employee ID:</b>	<b>73%</b>
<b>DOB:</b>	<b>47%</b>
<b>SSN:</b>	<b>47%</b>
<b>Shut Down:</b>	<b>20%</b>

# Telephone Elicitation - Findings

# SE Pentest Stage Five: Onsite Impersonation

Goal in this stage:

- ◆ Test physical access policies
- ◆ Access secure areas
- ◆ Education – take pictures
- ◆ Use pretext that should be identified

# We get stopped...

- ◆ What can a little bit of information, a cell phone and 15 minutes get us?

## Step 3: Critical Thinking

“...the mental process of actively and skillfully conceptualizing, applying, analyzing, synthesizing, and evaluating information to reach an answer or conclusion...” - 21<sup>st</sup> Century Lexicon

# Step 3: Critical Thinking

## Methodology for developing:

- ◆ Proper policies – answer questions employees will have like: What if, What When & How
- ◆ Usable scripts – simple processes for the “When” question
- ◆ Real world exercises – continual education to create a security minded culture

# Conclusion: Summary

Three simple (but not always easy) steps to mitigating SE attacks:

- ◆ Be educated
- ◆ Get regular check ups
- ◆ Create critical thinking infrastructure

And remember, technology won't keep you safe
